

Press Release ORGANO BALANCE GmbH, Berlin

## **ORGANO BALANCE to present latest research findings at the BIOTECHNICA Trade Show 2010**

### **Berlin-based company to intensify efforts in contract research and white biotechnology**

Berlin, September 28, 2010 – Once again this year, ORGANO BALANCE will present current projects and latest research findings to an international audience of experts at the BIOTECHNICA Trade Show taking place in Hannover, Germany from October 5 to 7, 2010.

Since 2001, the Berlin-based company has been doing research - primarily for clients from the fields of red, white and green biotechnology - on probiotic lactobacilli and yeasts, identifying their beneficial potential and rendering them suitable for use in innovative products.

Recently, the development of pilot processes for the production of protective substances that counteract pathogenic bacteria and cosmetic ingredients that help restore the equilibrium of the skin flora was successfully completed. ORGANO BALANCE is now in a position to offer clients standardized specimen for application tests.

For its activities in the field of white biotechnology, ORGANO BALANCE puts to use its immense experience with baker's yeast *Saccharomyces cerevisiae* as a production organism. The company has developed numerous yeast strains suitable for the sustainable and cost-effective production of a variety of substances and sees great growth potential in this field.

*"Our outstanding knowhow and a collection of more than 8000 different bacteria and yeast strains provide a unique basis for our research work. For our own projects, but predominantly for our collaboration partners we use our collection of microorganisms to develop new active substances and production methods for innovative products to be used in the fields of pharmaceuticals, nutrition, animal nutrition and personal care",* says Professor Christine Lang, Managing Director of ORGANO BALANCE. *"Therefore, a close and continuous exchange with our customers and the scientific community is indispensable to us. BIOTECHNICA as the leading biotechnology trade show provides a valuable platform for us",* Professor Lang went on to explain.

## ORGANO BALANCE

Interested visitors will receive more information on current projects at BIOTECHNICA in Hall 9, Booth C26. To make an appointment, please visit us on the Internet at <http://www.organobalance.com>. We are also happy to welcome visitors to our booth at any time without prior arrangement.

### About ORGANO BALANCE

ORGANO BALANCE GmbH is a company specializing in strain development and microbiological screening. ORGANO BALANCE taps the potential of beneficial microorganisms, known as specific probiotic cultures, in order to counteract, in a natural way, imbalances in the microflora, thus restoring the microbial equilibrium. In close cooperation with renowned industry partners, ORGANO BALANCE develops new biological products in the fields of pharmaceuticals, preventive health care, nutrition and cosmetics. In its development activities the company draws on its own collection of microorganisms suitable for use in foodstuffs as well as its own OASSYS® screening systems. ORGANO BALANCE was founded in 2001 and is based in Berlin. More information can be found at <http://www.organobalance.com>.

All product and company names mentioned herein are possibly protected, and the property of ORGANO BALANCE or other companies.
